## MAXIMUM LOAD

H = Stroke  
X = Distance to center of gravity  
S = Center of gravity  
Cantilever extension = H + X

The maximum load depends on the cantilever extension (maximum stroke A plus distance between the center of gravity of the working load and the mounting surface).

## VERTICAL DEFLECTION

H = Stroke  
S = Center of gravity  
X = Distance to center of gravity  
f = Deflection of theoretical axis

Total deflection =  
Static deflection + deflection under load  
Deflection measured at standstill, with  
10N / 2.25lbf Load.

Deflection for smaller or larger load masses  
can be linearly extrapolated using the data  
for 10 N / 2.25 lbf.

## ANGULAR DEFLECTION

Angular deflection (twist) of the mounting plate depends  
on the torque load to be absorbed and the cantilever ex-  
tension.

The angular deflection for smaller or larger torques can be  
linearly extrapolated from the deflection in the diagram.
